

Project Management with Simulation - Advanced

Project management has evolved from an auxiliary tool into an essential and interdisciplinary field. Technical expertise alone is no longer enough — in the modern company, you must be able to productively apply your knowledge to projects and endeavours.

Apart from the fundamental knowledge (see Project Management Fundamentals), numerous other factors are needed to successfully execute and complete a project. You need to be able to anticipate and eliminate various stumbling blocks.

This course complies with the internationally recognised standard “Project Management Body of Knowledge” established by the Project Management Institute, PMI.org.

Goals

- You know how to identify customer needs and to incorporate them into the project
- You efficiently assemble and effectively manage project teams
- You are aware of the problems that may occur between project management and functional hierarchy
- You understand the fundamentals and objectives of a company-wide project, programme and portfolio management

Contents

- Project, programme and portfolio management; the role of the PMO
- How to deal with stakeholders: friends and foes of the project
- Change requests, change management and negotiation techniques
- Leadership and team development: why we need conflict
- Communication in multi-cultural and international teams
- Risk management and quality management
